**IMPROVEMENTS.**

We look forward with favorable anticipations to the improvements to be made under the direction of the Bloomfield Improvement Association. We can scarcely believe that this society will come to the end reached by at least one other organization established in this place—the "Law and Order Association." The latter held business meetings, and its work came to an untimely death, although there is some good that might even now be done by such a society, judging from the appearance of some of our street corners nightly and from the violation of the Sunday laws by some of the business places in our village.

There is every reason to expect that the association recently formed will do a good work. Probably one of the first things to be dealt with on either side by a fine class of residences, having two of our churches facing upon it and three others within easy reach of it, it is desired to be put in first-class order. Now it is used largely for various sports. In this it serves no mean purpose; for some place is needed for these things, and there are advantages in having such a ground open to public view. But the Park might be laid out in walks adorned with shrubs, furnished with stationary benches and rustic chairs and also a good stand for our Amateur Band, and be a choice resort for the people of Bloomfield.

**THE END OF CHAPTER ONE.**

The first chapter of the Egyptian tragedy has ended. Alexandria, battered, despoiled, buried, is in the possession of the English. By a masterly stroke ARAB Pacha, after accomplishing all he planned in his first move, retreated towards Cairo. The hardest part of the war to the English, who are not over-scrupulous in their measures, is that it was successful. They who dreamed that the retreat of the Egyptians was cut off by the guns of the fleet in the harbor did not understand much about actual warfare.

Alexandria, with its memorable history, is placed a hundred years backward in its condition. Whatever may be the issue of the war, England will doubtless seek to retain its hold upon this key to Egypt and one of the most important Eastern sea-ports today. The plan will probably be urged that future protection is demanded.

They who have looked for but little resistance on the part of the Egyptians will probably find their judgement in error. In the event of the union of the forces of the false prophet, EL MADHDI, with the troops of ARAB Pacha, desperate war will be done. The struggle may reach wider than Egypt. All Europe is interested in the "Eastern question." There is a possibility of antagonism between England and France on account of the Suez Canal, and in view of French interests in North Africa.

It is not for a secular journal to appeal specially to religious prophecies; but in that quaint old book, the Bible, which shows itself to apply with ever fresh force to history as to character and conduct, are prophecies which point to the East, and between radical changes yet to take place. The civilized world will be concerned commercially and civilly with the results of the present conflict, but the student of history—sacred and profane—will mark the progress of the struggle with keenest mind.

**POLITENESS.**

The summer season, with its incidents of travel—on excursion or business, will furnish an abundant opportunity for the exercise and cultivation of that fine grace—general politeness. The young man will be expected, as a matter of course, to yield his place to the richly dressed young lady; he will exhibit a greater mark of the gentleman in giving place to an aged woman or the mother holding her child in her tired arms.

The gift of courtesy is not to be practiced by the stronger sex alone. Those generally ready to accept the proffer of a seat in the crowded car should at least favor their own kind by making room for these when to do so is not to inconvenience others. It is charged that it is not an uncommon thing to see ladies seated in such a manner in street-

cars that other ladies are compelled to remain standing, when a little effort on the part of the first would accommodate the others.

True politeness costs but little and it goes a great way. To ensure this it is not enough to carry a book of etiquette in the pocket. Nothing will serve quite so well in meeting the little frictions and vexations of Summer travel as a kind, unselfish heart. It will yield, moreover, a larger return of pleasure than will otherwise be experienced, from a trip to mountain, country or sea.

**DRIVEN WELLS FOR FIRE DEPARTMENTS.**—The fire department of Marshall, Michigan, has twenty-three driven wells ranging from sixty-five to one hundred and ten feet in depth. The piping is of wrought iron, one quarter inch thick and six inch bore. Their average cost was three hundred and twenty-five dollars, and they have been in use twelve years without any expense. At the recent Convention of the Michigan State Firemen's Association, Chief Purpus said the driven wells were an entire success, and that they had never been able to pump one of them dry. The Firemen's Journal says that numerous other instances might be cited to show that driven wells are serviceable and trustworthy. Of course they are not available in all places, but where they can be used they are economical and of great value. By attaching pumps to them, and pumping directly into the mains, driven wells have been found to give an abundant supply of water to good effect for both domestic and fire purposes, furnishing streams directly from the hydrant under sufficient pressure to render splendid service in putting out fires.—Scientific American.

Quite a considerable industry it is stated has sprung up in England recently—namely, that of making paint from steel scales, for the protection of iron and steel from corrosion. The scale is that which falls from the metal as it passes through the rolls; this is ground by special machinery, until as fine as flour, and is then mixed with boiling oil and coloring matter. The paint thus prepared is of two kinds—anti-corrosive, for use above water to prevent rust, and the anti-fouling, this latter to be used under water to prevent animal or vegetable life from attaching itself to ships' bottoms and other iron work—the prevention, in either case, being perfect.

A new method of preparing chloride has been adopted in Germany, the result being accomplished by mixing a heated solution of magnesium chloride, of suitable temperature, with about ten per cent. of manganese dioxide, and then exposing it to the action of heated air; by this means the chlorine is liberated, and may be used in the ordinary way.

Steam pressure regulators are now made more efficient by the combination, with a valve steam pipe leading from a boiler, of a lever connected with the valve stem—weighted at one end with a ball, and at the other end with an empty tank or box, nearly balanced by the ball. A box or tank, containing mercury, is connected with the steam-pipe outlet and with the lever tank or box, by tubular connections. By means of this arrangement, when there is an excess of steam pressure in the pipe outlet, steam enters the mercury tank and forces a portion of its contents into the lever tank, thus drawing down the long end of the lever, closing or partly closing the valve, and correspondingly cutting off the steam.

**A MODE OF HULLING WHEAT.**—A Swiss process of removing the bran of wheat without loss of nutritive matter is said to be obtained by moistening the wheat before grinding with a solution consisting of caustic soda in water. The solution is prepared by dissolving six and two-thirds pounds of caustic soda in one hundred and thirty-eight pounds of water. The steeping may occupy from fifteen to twenty minutes, and may be done in vats similar to those used by brewers. The caustic solution when prepared as above swells and loosens the hull proper, so that it may be removed by the slightest friction, leaving the gluten with the body of the grain.

**COMMENTS ON A RECENT FATAL CASE OF LEAD POISONING** in an English factory, Dr. William Webb, of Wexham, Derbyshire, tells the *Lancet* that twenty-five years ago poisoning by lead was of frequent occurrence at the lead smelting works in which that part of Derbyshire, and that since that time it has seldom been heard of. He attributes this immunity from poisoning in cases exposed to the fumes of lead to the fact that they were advised to partake freely of fat bacon, butter and other fatty substances, and to drink copiously of lemonade or dilute sulphuric acid in water. The hint was first obtained from Sir Thomas Watson's admirable lectures on the "Practice of Physic."—*London Lancet*.

**FOR THE PRESERVATION OF WOOD.**—A new wood preserving process has been invented in France by M. Jacques. He first impregnates the timber thoroughly with a simple solution of soap, mixed with an acid—preferably phenic acid. This causes the fermentation, in a few days, within the wood of a fatty acid, which is insoluble in water and impregnates the remotest fibers. The reaction of the acid on the soap does not take place until a portion of the water has evaporated. It is claimed that more perfect impregnation can be had in this way than with creosote, and there is no danger of the washing out of the preservative from the exposed surfaces, as when sulphate of copper is used. The government commission on technical railroad operation in France is said to favor this process.—*The Metal Worker*.

**THE REMOVAL OF SNOW IN ST. PETERSBURG.**—The snow is thrown into pits, which is melted in these by steam, and runs off into the river by suitable channels.

If it was right to do wrong, there would be more people right than wrong.

Gratitude is the memory of the heart.

## \$8,000 TO BE APPROPRIATED

**FOR THE SUPPORT OF BLOOMFIELD'S PUBLIC SCHOOLS.**

THE CALL FOR LAST MONDAY NIGHT'S SCHOOL MEETING BUT SLIGHTLY RESPONDED TO—VIEW OF VARIOUS CITIZENS AS TO THE LOCATION OF THE NEW SCHOOL-HOUSE—THE COMMITTEE TO STAND AND ANOTHER MEETING TO BE HELD.

The call for a school meeting to vote upon appropriations for the ensuing year and to take into consideration the feasibility of building a new school-house was but feebly responded to on Monday evening last. In the absence of Wm. A. Baldwin, Clerk of the District, the meeting was called to order by Mr. C. Poloubet and Charles M. Davis was unanimously elected chairman. Mr. W. W. Wyman acted as secretary. The call for the meeting was read and the matter of appropriation was taken up. The Trustees asked for \$8,000 to meet their demands during the coming year and the amount was accorded them without a dissenting voice. The new school-house business then followed. Mr. C. Poloubet asked what progress the Trustees had made towards securing a suitable location for the new school-house. Mr. C. Poloubet replied that the Trustees had made inquiries as regards a suitable location at West End and thus far had failed to secure a desirable place. In one instance, however, an effort had been made to secure a lot situated corner Washington and Hudson Avenues, containing about two and a half acres. The price asked was \$6,500. The most eligible part of the premises was located near the corner of these avenues and for this \$5,000 was asked. In many of the localities parties have declined to sell, but they were willing to have a school-house built near their property. A lot corner of Madison and Ashland Avenues, containing three-quarters of an acre, was offered to the Trustees for the sum of \$5,000. On account of its location about \$450 additional would be required to put it in suitable shape for building purposes. Other locations were talked of but many of them were objectionable for many reasons. Mr. Henry Russell stated that he had been to the lot at the corner of Madison and Ashland Avenues had been in the market a number of years and he thought the price might be lowered if the Trustees concluded to purchase.

The question whether a school-house built at West End would materially affect the number of scholars at the Centre School and whether it would not be advisable to locate the new building nearer the central portion of the town was discussed. It was stated that about fifty scholars from the West End are about all that would be benefited and the object of the Trustees is to remove the whole Primary Department from the Centre Building, thereby giving the much desired room to the Grammar and High School Departments, and it is their aim to locate the new building where the greatest number of scholars attending the Centre School would be benefited. Mr. Poloubet clearly showed that Berkeley School would be central for a number of scholars at West End. He also stated that in the High School three classes were reciting in the same room at once and one additional was studying at the same time, which obviously made a confusion. In reply to the question as to how many attended the High School, Mr. Poloubet answered, thirty-five. Mr. Russell stated that his children had attended school in a room one-half the size and where there were seventy scholars. Mr. Poloubet gave a clear and concise statement of the disadvantages the Grammar Department and High School labored under and urged the removal of the Primary Department entirely from the Centre School. He would naturally attend to the removal of the Primary Department from the Centre School, which he thought would meet the demands and it would be advisable, he seemed to him, to have money attached to the High School. Mr. G. T. Moore stated as a point for West End interests that many of the children of small size were compelled to cross the railroad track of the D. & W. R. R. in going to and returning from school, and that parents who have been sending their children to private schools were not satisfied with the results and he preferred the instruction as given at the public school. Dr. W. H. White stated that he had never known of a case where children had been injured by crossing the railroad tracks, but was satisfied that many of the scholars suffered ill health by being compelled to be confined in crowded and poorly ventilated classrooms and considered many of the class rooms at the Centre School too small for the number of scholars and detrimental to teachers and scholars both. Mr. H. M. Barrett said he concurred in the idea of building a separate primary school and if a school-house were erected within a quarter of a mile of the Centre School it would undoubtedly give the desired relief. Mr. Maxwell stated that as only one school-house could be built at present it should be located where it would be of the greatest benefit and for the best interests of the whole District. The matter of selecting a suitable location is an up-hill job, for the property-owners are not anxious to sell their property for the purpose intended and he stated that the property next to the Theological Seminary, known as the Close property, was for sale and thought it could be purchased at \$5,000 or \$3,000 and he judged it to be a good location. Mr. C. Poloubet asked that the Trustees be continued a committee on plot of ground for the erection of a new school-house and that they be required to report at a future meeting. The following resolution was offered by Mr. J. R. Oakes and unanimously adopted by the meeting:

Resolved: That the Trustees be continued a committee to find lot for the location of a primary school-house and present report, plans and specifications for same at a meeting to be held Friday evening, Sept. 19th.

The meeting then adjourned.

**DARING HIGHWAY ROBBERY.**  
On Sunday night last Mr. Danl. Hewitt, an old and well known citizen of town, started on his route through the country to purchase butter, eggs and other country produce. After passing Mountain View and while near the Powder House, a man stepped out of the bushes and asked him for a match. Mr. Hewitt told him he had none and started to drive on, when another man appeared, who grabbed the horse by the head. Mr. Hewitt attempted to draw his revolver from his pants-pocket, but was prevented from so doing by the first man, who caught him by the throat and threw him overboard into the wagon, threatening to kill him if he made any outcry. The two robbers then relieved Mr. Hewitt of \$88, his watch and his revolver. They then formed a noose of rope and, placing it around Mr. Hewitt's neck, he was pulled in the rear part of the wagon and was caught him by the throat and threw him overboard into the wagon, threatening to kill him if he made any outcry. The two robbers then relieved Mr. Hewitt of \$88, his watch and his revolver. They then formed a noose of rope and, placing it around Mr. Hewitt's neck, he was pulled in the rear part of the wagon and was caught him by the throat and threw him overboard into the wagon, threatening to kill him if he made any outcry. The two robbers then relieved Mr. Hewitt of \$88, his watch and his revolver. They then formed a noose of rope and, placing it around Mr. Hewitt's neck, he was pulled in the rear part of the wagon and was caught him by the throat and threw him overboard into the wagon, threatening to kill him if he made any outcry. The two robbers then relieved Mr. Hewitt of \$88, his watch and his revolver. They then formed a noose of rope and, placing it around Mr. Hewitt's neck, he was pulled in the rear part of the wagon and was caught him by the throat and threw him overboard into the wagon, threatening to kill him if he made any outcry. The two robbers then relieved Mr. Hewitt of \$88, his watch and his revolver. They then formed a noose of rope and, placing it around Mr. Hewitt's neck, he was pulled in the rear part of the wagon and was caught him by the throat and threw him overboard into the wagon, threatening to kill him if he made any outcry. The two robbers then relieved Mr. Hewitt of \$88, his watch and his revolver.
